Speech and Language Evaluation Scale Second Edition (SLES-2)

Stephen B. McCarney Samm N. House © 2015

The Speech and Language Evaluation Scale- Second Edition (SLES-2) was developed to aid in screening, identification, and program planning for children and adolescents with speech and/or language problems in school. The SLES-2 is based on the most commonly recognized definition of communication disorders by the American Speech-Language-Hearing Association (ASHA) (1993). Each subscale is associated with one of the most commonly recognized characteristics of speech and language disorders.

The SLES-2 Speech subscales are

- Articulation,
- Voice, and
- Fluency.

The **SLES-2** Language subscales are

- Form.
- Content, and
- Pragmatics.

The **SLES-2** is a renorming of the *Speech and Language Evaluation Scale* (McCarney, 1989). It was standardized on 2,573 students 4 through 18 years of age. Separate norms are provided for males and females. The demographic characteristics of the standardization population closely represent those of the nation for gender, race, residence, geographic area, and occupation of parents.

Internal consistency reliability of the **SLES-2** was .98 for the total score. Test-retest reliability for the total score was .79 and inter-rater reliability was .93. Content, construct, and criterion-related validity are reported.

Each item on the **SLES-2** is rated using a four-point scale from (0) NEVER to (3) ALWAYS. The **SLES-2** takes a rater familiar with the child or youth approximately 20 minutes to complete. Following completion, four types of scores may be obtained: frequency rating for individual items (reflecting the degree of success demonstrated for a communication skill), subscale standard score, quotient, and percentile. Using the subscale standard scores, a profile of the student's level of speech and language functioning across the subscales can be constructed.

The Speech and Language Classroom Intervention Manual (206 pages, © 1990) includes goals, objectives, and intervention strategies for the communication skills on the scale and is designed for the convenient development of the student's IEP, as well as classroom intervention. The SLES-2 Quick Score is a Windows®-compatible computer program that converts raw scores to standard, quotient, and percentile scores.

The SLES-2 complete kit includes the Pre-Referral Speech and Language Checklists (50), Intervention Strategies Documentation Forms (50), SLES-2 Technical Manual, SLES-2 Rating Forms (50), and the Speech and Language Classroom Intervention Manual.

SCHOOL VERSION RATING FORM

Diane R. Fressola and Sandra Cipponeri Hoerchler

RATING GUIDELINES

- The student should be rated by educational personnel with primary observational opportunities who work directly with the student in school situations.
- The rater should randomly select students from their classroom. For example, the rater may choose to rate every 5th student on their class roster. Handicapped students who are randomly selected to be rated should not be excluded.
- Should the rater have no knowledge of the student's ability to perform a particular item on the scale, he/ she may consult other school personnel (e.g., teacher, counselor, etc.) to provide information for that item.
- The rater should rely on his/her observation of the student's speech/language as it occurs naturally in the school environment.
- It is recommended that the rater read each quantifier with the item before rating the item. Using item 10 as an example, the rater would first read "Rate of speech is NEVER too fast or too slow" then "Rate of speech is SOMETIMES too fast or too slow" then "Rate of speech is OFTEN fast or too slow" and finally, "Rate of speech is ALWAYS too fast or too slow."
- It is not necessary to complete the rating of a student in one day. Several days may elapse before the rater is able to complete the scale.

NEVER

This quantifier indicates that the student does not exhibit the speech/language problem indicated on the scale. It would be rare or accidental if the student exhibited the speech/language problem.

1

SOMETIMES

This quantifier indicates that the student sometimes, but not often, demonstrates the speech/language problem on the scale. It indicates that the student has the ability to perform the speech/language skill and does not demonstrate the problem most of the time.

2

OFTEN

This quantifier indicates that the student often, but not always, demonstrates the speech/language problem on the scale. The student has some ability, but most of the time exhibits the problem.

3

ALWAYS

This quantifier indicates that the student consistently exhibits the speech/language problem indicated by the item. It may be that the student has not developed the skill or has no ability to successfully perform the skill. It would also be used when an item is not an age appropriate skill and the student would not be expected to be able to exhibit the skill at his/her age (e.g., reading, writing, etc.). If the student exhibits an item that he/she would not be expected to exhibit at his/her age, rate the item based on his/her ability.

IV. Goals, Objectives, and Interventions

Substitutes one sound for another sound 1

Goals:

- 1. The student will improve his/her articulation skills.
- 2. The student will improve his/her discrimination of speech sounds.
- 3. The student will improve his/her production of speech sounds in isolation.
- 4. The student will improve his/her production of speech sounds in syllables.
- 5. The student will improve his/her production of speech sounds in words.
- 6. The student will improve his/her production of speech sounds in sentences.
- 7. The student will improve his/her production of speech sounds in spontaneous speech.

Objectives:

- 1. The student will discriminate between correct and incorrect production of the target __ out of ____ trials.
- 2. The student will imitate correct production of the target sound in iso
- 3. The student will imitate correct production of the target trials.
- 4. The student will spontaneously produce the
- 5. The student will spontaneously prod
- 6. The student will spontage of trials.

Speech and Language Manual Speech and Language Manual Speech Intervention Manual

Interventio

has no

2. the studer (e.g., deve be produced ly until the age of 8 or 9).

- **3.** Speak to the student to explain what he/she needs to do differently (e.g., use the /r/ sound instead of the /w/ sound). The teacher should be careful to use the sound that is being targeted and not the letter name (e.g., /r/ not / ar/).
- **4.** Reinforce the student for correct productions of the target sound: (a) give the student a tangible reward (e.g., classroom privileges, line leading, passing out materials, five minutes free time, etc.) or (b) give the student an intangible reward (e.g., praise, handshake, smile, etc.). Initially, each correct production may need reinforcement. As the student progresses, more random reinforcement may be adequate.

Be sure that the student can hear the difference between the sound as it should be made (target sound) and the way he/she is producing it

out

- **6.** Have the student raise a hand or clap hands when he/she hears the target sound produced during a series of isolated sound productions (e.g., /s/, /sh/, /r/, /m/, /r/, /t/, /k/, /r/, /z/, /w/, /n/, /r/, etc.).
- 7. Use a puppet to produce the target and error sounds. The student earns a sticker for correctly distinguishing a set number of correct/ incorrect productions the puppet makes.
- **8.** Have the student stand up each time he/ she hears the target sound produced accurately in contrast to the error sound (e.g., /w/, /r/, /r/, /w/, /w/, /w/, /r/, /r/, etc.).
- **9.** Have the student show "thumbs up" each time the target sound is produced accurately when a picture is labeled and "thumbs down" if the target sound is produced inaccurately.
