

INTRODUCTION

Animals bite. They bite hard. They use their teeth. They **pierce** another object. Pierce is when a sharp object goes through something.

They bite for different reasons. They bite to protect themselves. They bite to hunt. They bite to hurt. They bite to eat. They bite to play. They bite to warn. They bite to take charge.

Some bites don't break the skin. Some bites cause wounds. **Wounds** are cuts. They bleed. Some bites tear off limbs. Some bites are poisonous. Some bites kill.

Some animals are extreme biters. Their bites are bigger. Their bites are better. They're the most exciting biters in the animal world!

Biting is a natural reaction.
