

Loki fought Heimdall. Heimdall was a god. He guarded the rainbow bridge. It was a bridge that connected to the

Explained By Science

Some people have gigantism. This is a rare disorder. It's caused by increased levels of growth hormones. Hormones are natural chemicals in the body. Gigantism happens around age 13. There are strange tumors on the pituitary gland. This gland is at the base of the brain. It makes growth hormones. Gigantism makes people grow very tall. People also grow wider. They're much larger than other people. They have big hands. They have big feet. They have thick toes. They have thick fingers. Their teeth spread out. Their jaw juts out. They have big foreheads. They have flat noses. They have large heads. They have large lips. They have large tongues. Their organs get big. They have patches of brown skin. They have headaches. They can't see well. They feel sick. They sweat a lot. They have sleeping problems. They don't live as long as others.

Baldur came back to life after Ragnarok.

human world. Loki and Heimdall killed each other. While they fought, Loki's army set the world on fire. The fire killed humans. It killed giants. It killed gods. The earth sank into the sea. Then it rose again. The world started over.

Don't anger the gods. Loki had great powers. And he knew how to use them.
